

INSTALAR ODOO 14 EN UBUNTU

Voy al enlace https://docs.conda.io/projects/miniconda/en/latest/ donde utilizare los códigos en la terminal.

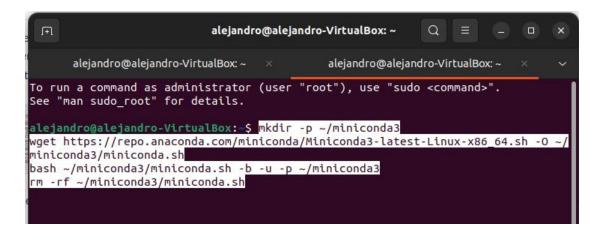

Empezare con los primeros comandos

```
To run a command as administrator (user "root"), use "sudo <command>".
See "man sudo_root" for details.

alejandro@alejandro-VirtualBox:~$ mkdir -p ~/miniconda3
```

Este seria el resultado

```
alejandro@alejandro-VirtualBox:-$ mkdir -p -/miniconda3
wget https://repo.anaconda.com/miniconda/Miniconda3-latest-Linux-x86_64.sh -0 -/miniconda3/miniconda.sh
bash -/miniconda3/miniconda.sh -b -u -p -/miniconda3
rm -rf -/miniconda3/miniconda.sh -
-2024-01-10 09:30:14-- https://repo.anaconda.com/miniconda/Miniconda3-latest-Linux-x86_64.sh

alejandro@alejandro-VirtualBox:-$
```

Cierro el terminal y lo vuelvo a abrir

```
alejandro@alejandro-VirtualBox: ~ Q = _ To run a command as administrator (user "root"), use "sudo <command>". See "man sudo_root" for details.

(base) alejandro@alejandro-VirtualBox:-$
```

Utilizo el comando conva env list y me da este resultado:

```
(base) alejandro@alejandro-VirtualBox:~$ conda env list
# conda environments:
#
base * /home/alejandro/miniconda3
(base) alejandro@alejandro-VirtualBox:~$
```

Utilizo el comando conda create -n c odoo14 python=3.8

```
(base) alejandro@alejandro-VirtualBox:-$ conda create -n c_odoo14 python=3.8
```

Este es el resultado:

```
(base) alejandro@alejandro-VirtualBox:~$ conda create -n c_odoo14 python=3.8
Channels:
- defaults
Platform: linux-64
Collecting packaÿe metadata (repodata.json): done

Executing transaction: done

#

# To activate this environment, use

#

# $ conda activate c_odoo14

#

# To deactivate an active environment, use

#

$ conda deactivate

(base) alejandro@alejandro-VirtualBox:~$
```

Activamos c odoo14

```
(base) alejandro@alejandro-VirtualBox:~$ conda activate c_odoo14 (c_odoo14) alejandro@alejandro-VirtualBox:~$
```

Teniendo activado c_odoo14 utilizamos el comando pip install ---upgrade pip setuptool que me da este resultado:

```
(c_odoo14) alejandro@alejandro-VirtualBox:-$ pip install --upgrade pip setuptool

```

Se va a aplicar todo el código dentro de la terminal y me va a pedir la contraseña del usuario, se la doy, y comenzara la instalación de odoo.

Este es el resultado final

```
Odoo 14.0 Installation has finished!!;) by odooerpcloud.com
You can access from: http://10.0.2.15:1469 or http://localhost:1469
(base) alejandro@alejandro-VirtualBox:~/Escritorio/odoo$
```

Mediante la terminal accedemos a la ubicación de la descarga, y usando ls vemos que hay dentro:

Dentro instalo los requirements.txt usando el comando pip3 install -r requirements.txt

```
ase) alejandro@alejandro-VirtualBox:/opt/odoo14/14.0/odoo$ pip3 install -r requirements.txt

Instalo PYCHARM desde la tienda de ubuntu

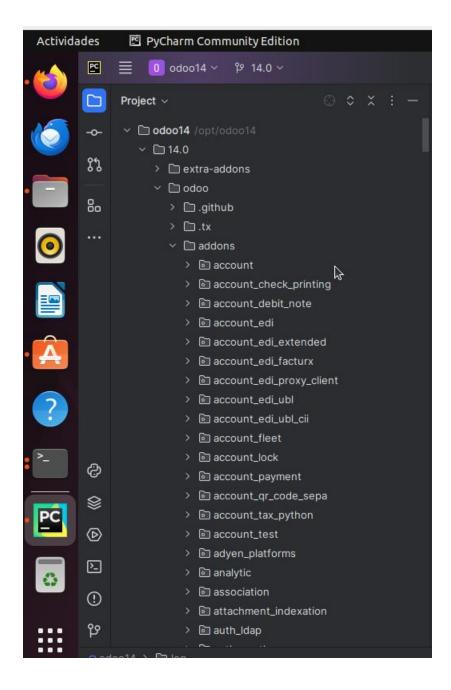

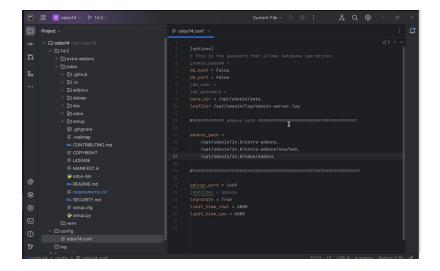

Dentro de PyCharm abro la ubicacion de odoo14

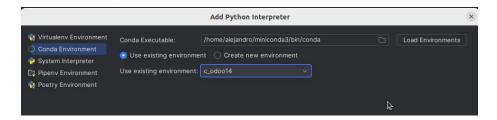

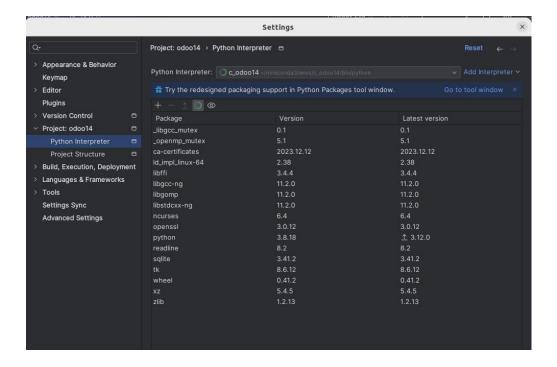

Dentro de las opciones añadimos un nuevo interprete de python

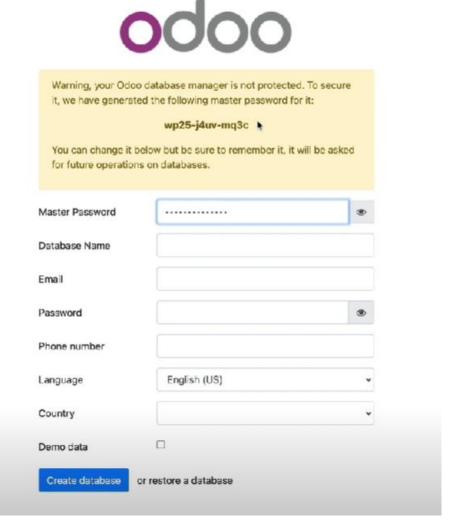

Escojo que sea el c_odoo14 y le doy a ok

Así se habrá instalado el nuevo interprete.

Tras esto habrá que entrar en el link localhost dentro del navegador y nos saldrá la creación del odoo

Al rellenar los datos se creara la base de datos y nos funcionara odoo adecuadamente
